

Anesthesia Balloons

Turning Panic into
PLAY!

The Revolutionary PEDIA (pee'-dee-uh) is the only
MASK-FREE anesthesia delivery system

Anesthesia Induction is the MOST stressful part of the perioperative experience for a child. Studies show anxiety at induction is experienced by over 50% of children. This anxiety can cause negative maladaptive effects. These include intraoperative resistance, emergence delirium, increased pain, and decreased healing. It is also associated with behavior changes at home such as aggression, regression, nightmares, and bedwetting as well as mistrust of medical personnel. These maladaptive changes can last weeks, months or even years. Articles show some children who experience perioperative anxiety can grow into adults who avoid medical care, damaging long-term health.

The revolutionary PEDIA engages, entertains, and distracts the child with its colorful WHISTLING Balloon.

PEDIA can be used MASK-FREE or with the anesthesia mask. Let the child watch the PEDIA Animation by scanning the QR Code on the label. In the OR, attach the PEDIA to the anesthesia circuit, turn up the flows, then let the child enjoy the whistling sound of the balloon as he/she inhales and exhales anesthetic gases through it.

- FDA Cleared
- May improve HCAHPS
- Latex-Free
- Phthalate-Free
- Disposable
- Interactive
- No Sedation
- No BRUTANE!
